

Build integrations, at enterprise strength.

ENIT Flowbuilder transports, transforms, and integrates your data with your communication systems — with **purpose-built modules specialized for CCM/CXM**. Build custom flows in a visual editor, deploy them with a single click.

— THE BUSINESS VALUE

- 01 **Visual development** — A browser-based editor with a palette of configurable nodes. New developers can understand, maintain, and extend existing solutions at a glance.
- 02 **Hybrid and cloud-native** — Runs on-premises, private cloud, public cloud, or hybrid. Container-native design gives elastic scalability and high availability through standard orchestration.
- 03 **Built for volume** — Handles high volumes with proven performance. Supports both batch and real-time / on-demand processing — cost-efficient and reliable.
- 04 **DevOps-ready** — Git for version control, CI/CD pipelines for automated testing and controlled releases, integrated monitoring and observability hooks.
- 05 **Enterprise security** — OIDC / Keycloak with role-based access and encrypted credentials. SAST scanning, vulnerability scanning, SBOM generation, and automated dependency audits in the build pipeline.

— WHO BENEFITS MOST?

Built for organizations orchestrating document and data flows across CCM platforms, ERPs, and delivery channels — where development speed, cost efficiency, and operational control matter most. Typical users: financial institutions, energy and telecom, public sector, and manufacturing.

— BUILT BY ENIT

CCM specialists with +10 years of Nordic implementations — across OpenText, Quadiant, and SMART Communications environments.

Unlike vendor-native tools, ENIT products works across platforms and ERPs from day one, because our customers rarely run just one system.
